

Portals

The mission of universities has been expanding in recent years to include technology education and enablement for its students, faculty and staff. The quality and variety of services provided by the university to its campus community and collaborators is becoming a competitive advantage, or a disadvantage, for retention and success if not adequately addressed. As a result, portals have been adopted as a focal point to access university services.

Integration with Xythos Accelerates Portal Adoption and Usage

Xythos believes content is key to the widespread adoption and usefulness of any portal, and content management a critical success factor. By integrating collaborative file sharing and easy-to-use, document management functionality within the portal, employees have a compelling reason to use the portal on a daily basis. Other applications within the portal will also become more frequented as the portal becomes the single destination for employee's jobs.

Xythos' scalable, open standards-based content management platform is an ideal choice for universities because it:

- **Supports Single-Sign On:** The Xythos platform is designed to leverage existing standards for system authentication and security-making it easy to integrate WebFile Server into a university's identity management directories and portal infrastructure.
- **Provides Web-Based Workspaces:** Xythos provides web-based workspaces for securing, storing and sharing all types and sizes of files. Out-of-the-box, Xythos provides a set of comprehensive library services, including file check-in/out, subscriptions, comments, version control.
- **Allows User to Self-Manage Their Content:** Xythos enables students and faculty to control their own content by publishing, sharing and recovering lost files. IT is freed from having to do those tasks, but still has administrative control to set quotas, back up files and audit the system.
- **Reduce Storage Management Requirements:** Xythos supports home folders, group and project web spaces, and departmental fileshares, helping to reduce file duplication as well as university's storage management requirements. Xythos also provides an alternative to email attachments, replacing them with secure file links, further contributing to storage consolidation and reduced costs.

Xythos for Portals

- Improved portal interactivity
- Secure document collaboration
- Open standards-based technology
- Easy integration & customization

Xythos Products

- Xythos WebFile Server
- Xythos portlets

Representative Portal Customers

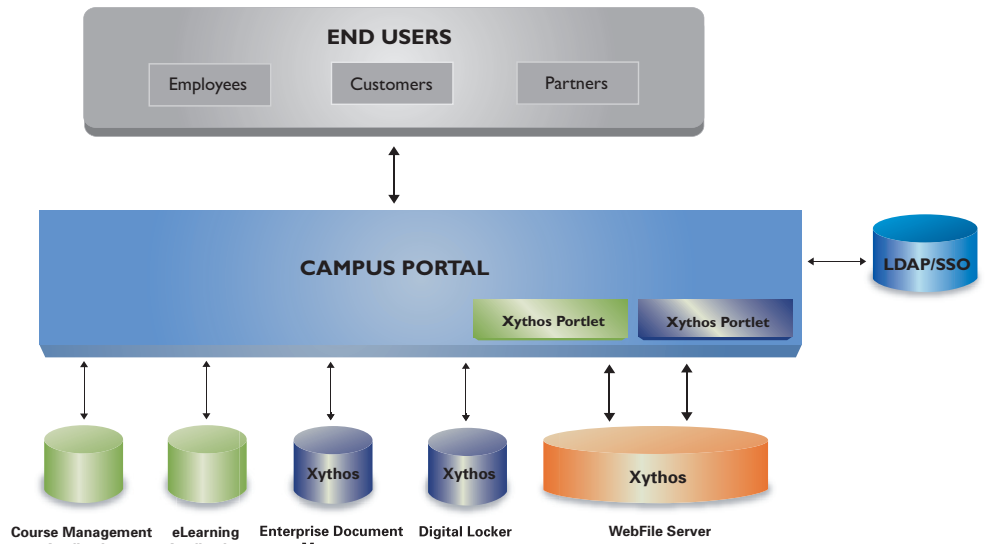

- Loyola Marymount University
- Northeastern University
- SAS Institute
- University of San Francisco
- University of Wisconsin

Portals

“By integrating Xythos we expect to breathe new life into our campus portal and drive user adoption. Xythos' single sign-on integration with Luminis portal ensures that students, faculty and staff can securely access and share content from anywhere helping improve productivity and increase campus-wide collaboration.”

Erin Griffin
CIO of Loyola Marymount University

Xythos can be intergrated into the portal as portlets or directly embedded into the portal via SSO, displaying the entire Xythos UI.

Customer Spotlight: Northeastern University

Northeastern University is a student-centered, practice-oriented national research university with a mobile and distributed global campus community of over 50,000 students, faculty, and staff. As the leading co-op school in the country, several thousand of the University's students are dispersed around the world at varied workstations and time zones.

Anticipating that demand for anytime, anyplace access to real-time data and collaboration would become more integral to the campus community, the Northeastern Information Services team launched the Northeastern On Demand initiative, which allowed their campus community to access their files and applications through the University's existing Luminis portal based on a user's login, creating a web-based virtual file management environment for the entire campus. Now, most everything that a student, faculty member or Northeastern staff member can access on campus, they can access via Northeastern On Demand, no matter where they are located or what platform their PC is running on. Northeastern On Demand provides the applications users need to access, create and modify data as well as a secure way to share their work with others, no matter where they are located.

Whether working collaboratively on a class project, a research initiative, or a work assignment for a co-op employer, students and faculty can productively connect, regardless of location. Northeastern On Demand also centralizes data backup and restoration, ensuring that students and faculty's work will never be lost.
